 **Online Database Search Form**

Search requests relating to published applications, patent families, and litigation can be submitted by filling out this form and clicking on "Send."

\* indicates mandatory information.

**\* Tech Center:**

☐ TC 1600 ☐ TC 1700 ☐ TC 2100 ☐ TC 2600 ☐ TC 2800  
☐ TC 2900 ☒ TC 3600 ☐ TC 3700 ☐ Law Lib ☐ Other

**Your Contact Information:**

\* Email Address:   
(e.g., Susan.Smith@uspto.gov)

Mailbox No.:

\* Case serial number:

If not related to a patent application, please enter NA here.

Class / Subclass(es)

Earliest Priority Filing Date:

**Format preferred for results:**

☒ Paper ☒ E-mail ☐ Diskette

**Provide detailed information on your search topic:**

- In your own words, describe in detail the concepts or subjects you want us to search.
- Include synonyms, keywords, and acronyms. Define terms that have special meanings.
- For Chemical Structure Searches Only  
Include the elected species or structures, keywords, synonyms, acronyms, and chemical names.
- For Sequence Searches Only  
Include all pertinent information (parent, child, divisional, or issued patent number and serial number).
- For Foreign Patent Family Searches Only  
Include the country name and patent number.
- Provide examples or give us relevant citations, authors, etc., if known.
- FAX or send the abstract, pertinent claims (not all of the claims), drawings, and other relevant information to the EIC or branch library.

**Enter your Search Topic Information below:**

See attached.

**Special Instructions and Other Comments:**

(For fastest service, let us know the best times to contact you, in case the searcher needs to contact you for more information.)

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (previously presented) A method for conducting a business transaction over a network, the method comprising the computer-implemented steps of:
- specifying, in a publicly-available description of a web service that is provided by a first party, that at least some communications to said web service are to include trading partner information;
- receiving, by said first party, a request for said web service;
- wherein said request was constructed, based on said description, to include particular trading partner information associated with business transactions between said first party and a second party;
- wherein said particular trading partner information includes identification of said second party as a trading partner of said first party;
- based on said particular trading partner information, determining whether said second party is an established trading partner of said first party;
- if it is determined that said second party is an established trading partner of said first party, then based on said particular trading partner information, retrieving information about one or more agreements that govern business transactions between said first party and said second party; and
- servicing said request for said web service according to one or more of said agreements.

2. (canceled)
3. (original) The method of Claim 1, further comprising the computer-implemented steps of:  
  
based on at least a portion of said particular trading partner information, determining  
  
whether said second party is an established trading partner of said first party;  
  
and  
  
if it is determined that said second party is an established trading partner of said first  
  
party, then accessing, based on said particular trading partner information,  
  
information about said second party.
4. (original) The method of Claim 1, further comprising the computer-implemented steps of:  
  
based on at least a portion of said particular trading partner information, determining  
  
whether said second party is an established trading partner of said first party;  
  
based on at least a portion of said particular trading partner information, determining  
  
whether said second party is entitled to conduct said business transaction; and  
  
if it is determined that said second party is an established trading partner of said first  
  
party and that said second party is entitled to conduct said business  
  
transaction, then accessing, based on said particular trading partner  
  
information, information about said second party.
5. (original) The method of Claim 1, further comprising the computer-implemented steps of:

based on at least a portion of said particular trading partner information, determining

whether said second party is an established trading partner of said first party;

and

if it is determined that said second party is an established trading partner of said first

party, then

accessing, based on said particular trading partner information, information

about one or more agreements between said first party and said second

party, wherein said agreements are associated with business processes

between said first party and said second party, and

servicing said request for said web service according to one or more of said

agreements.

6. (original) The method of Claim 1, wherein said description of said web service is represented in Web Services Description Language (WSDL).
7. (original) The method of Claim 1, wherein said description of said web service is registered in a Universal Description, Discovery and Integration (UDDI) registry that is available to the public.
8. (original) The method of Claim 7, wherein said request was constructed based on information obtained by accessing said description from said registry and interpreting said description.
9. (previously presented) The method of Claim 1, wherein said particular trading partner information is received in a SOAP message.

10. (original) The method of Claim 1, wherein said particular trading partner information includes identification of a physical site that is associated with said second party from which said request is received.
11. (original) The method of Claim 1, wherein said particular trading partner information includes identification of a type of party that characterizes said second party.
12. (original) The method of Claim 1, wherein said particular trading partner information includes identification of a business purpose that is associated with said request.
13. (original) The method of Claim 1, wherein said particular trading partner information includes a username and a password that are used by said first party to authenticate said second party as an established trading partner of said first party.
14. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 1.
15. (canceled)
16. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 3.
17. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 4.

18. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 5.
19. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 6.
20. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 7.
21. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 8.
22. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 9.
23. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 10.

24. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 11.
25. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 12.
26. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 13.
27. (previously presented) A method for conducting a business-to-business transaction over a network using SOAP messaging, in which a first legacy application that is not designed to communicate with web services and that is associated with a first party communicates with a second application that is associated with a second party, the method comprising the computer-implemented steps of:  
specifying in a publicly-available description of a web service, that at least some XML documents that are transmitted to said first legacy application as part of web service exchanges, are to include specific trading partner information;  
receiving in a SOAP-based message from said second application, by said first legacy application, an XML document that is associated with a business-to-business transaction between said first party and said second party;

- wherein said XML document was constructed, based on said description, to include
- identification of said second party as a trading partner of said first party;
- based on said particular trading partner information, determining whether said second party is an established trading partner of said first party;
- if it is determined that said second party is an established trading partner of said first party, then based on said particular trading partner information, retrieving information about agreements that govern business transactions between said first party and said second party; and
- servicing, by said first legacy application, said business-to-business transaction according to one or more of said agreements.
28. (original) The method of Claim 27, wherein said XML document received from said second application includes particular trading partner information, the method further comprising the computer-implemented steps of:
- based on at least a portion of said particular trading partner information that is included in said XML document, accessing information about one or more processes used for business transactions between said first party and said second party; and
- replying, by said first legacy application, to said second application in response to said XML document and according to a process of the one or more processes.
29. (original) The method of Claim 27, wherein said second application is a legacy application that is not designed to communicate with web services.

30. (original) The method of Claim 27, wherein said description of said web service is represented in Web Services Description Language (WSDL).
31. (original) The method of Claim 27, wherein said description of said web service is registered in a Universal Description, Discovery and Integration (UDDI) registry that is available to the public.
32. (original) The method of Claim 31, wherein said XML document was constructed based on information obtained by accessing said description from said registry and interpreting said description.
33. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 27.
34. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 28.
35. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 29.
36. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 30.

37. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 31.
38. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 32.
39. (currently amended) A method for conducting a business transaction over a network, the method comprising the computer-implemented steps of:
- accessing, by a second party, from a publicly-available Universal Description, Discovery and Integration (UDDI) registry, ~~by a second party~~, a description of a web service that is provided by a first party, wherein said description includes a requirement that at least one communication to said web service is to include trading partner information;
- determining from said description, by said second party, that at least one communication to said web service is to include trading partner information;
- constructing, based on said description, a message to said web service that includes particular trading partner information according to said requirement; ~~[[and]]~~
- wherein said particular trading partner information includes identification of said second party as a trading partner of said first party; and
- transmitting said message to said web service to allow said web service to:
- determine, based on said particular trading partner information, whether said second party is an established trading partner of said first party;

if it is determined that said second party is an established trading partner of  
said first party, then based on said particular trading partner  
information, retrieve information about one or more agreements that  
govern business transactions between said first party and said second  
party; and  
service a request for said web service according to one or more of said  
agreements.

40. (original) A computer-readable medium carrying one or more sequences of instructions which, when executed by one or more processors, causes the one or more processors to perform the method recited in Claim 39.
41. (previously presented) The method of Claim 1, wherein said publicly-available description of said web service specifies requirements for becoming a trading partner of said first party.
42. (previously presented) The method of Claim 27, wherein said publicly-available description of said web service specifies requirements for becoming a trading partner of said first party.
